

HEMISPHERICAL CEMENTLESS CUPS

Mpact System is a comprehensive hemispherical cup platform featuring different shell and liner designs and materials allowing for efficiently treating the majority of the clinical cases from primary to **revision** surgeries, according to patients' needs.

ADVANCED MATERIALS

COMPREHENSIVE PRODUCT RANGE

FIRM I INFR LOCKING MECHANISM

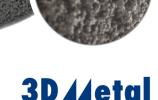

ADVANCED MATERIALS: OPTIMAL PRIMARY STABILITY AND SECONDARY FIXATION

The Mpact system makes use of different advanced materials and manufacturing technologies. Both MectaGrip and 3D Metal allow for designing and manufacturing implants featuring a high friction coefficient, increasing grip at the bone interface, thereby obtaining a superior primary stability. [2] Moreover, the porous structure parameters in line with the commonly accepted parameters [2,5] create a favorable environment for the bone. [6,7,8,9] The efficient connection with the bone has been validated by means of an animal study in young sheep. [2]

11ectaGrip

MectaGrip is a **porous coating treatment** applied to the Mpact shells, consisting of a layer of commercially **pure titanium** deposited through a special Vacuum Plasma Spray technique (VPS). Titanium porous coating allows for an enhanced biocompatibility, thanks to the pure titanium composition and optimized porosity.

3D Metal is an advanced biomaterial structure that is finely engineered for the bone. It is made of Titanium alloy (Ti6Al4V), and it is obtained by means of 3D printing technology, an innovative one-step layer-by-layer additive manufacturing process (not a coating).

This advanced technology allows for designing different engineered 3D net structures starting from a CAD model in a precise, predictable and reproducible manner. By means of a **single technology** it is possible to efficiently face most clinical cases, from standard primary to complex revision surgeries.

COMPREHENSIVE PRODUCT RANGE

SEVERAL SHELL VERSIONS

NO-HOLE MectaGrip from size 46 mm to size 66 mm

TWO-HOLE MectaGrip from size 46 mm to size 66 mm 3D Metal from size 46 mm to size 66 mm

to size 76 mm 3D Metal MULTI-HOLE THIN from size 48 mm to size 60 mm

MULTI-HOLE

from size 46 mm

from size 46 mm

to size 76 mm 3D Metal

MectaGrip

MectaGrip from size 56 mm to size 76 mm

RIM-HOLE

The RIM-HOLE SHELL allows for the use of cancellous and cortical bone screws

CANCELLOUS BONE SCREW

 \emptyset 6,5 mm from L 15 mm to L 70 mm

DM CUP

Ø 4 mm from L 25 mm to L 55 mm Compatible with Rim-hole only

COMPRESSION POLYAXIAL LOCKING SCREW

Ø 6,5 mm from L 15 mm to L 70 mm Compatible with Multi-hole only (non-Thin version)

COBALT-FREE DOUBLE MOBILITY

MectaGrip coated High Nitrogen Stainless Steel from size 42 mm to size 66 mm

DM LINER UHMWPE Highcross

compatible with all Mpact System cups

MULTIPLE BEARING OPTIONS

UHMWPE HIGHCROSS LINERS

Hooded

Offset 4 mm

Face-changing 10°

Apact System

FIRM LOCKING MECHANISM

Mpact system features multiple bearing options characterized by optimized locking mechanisms.

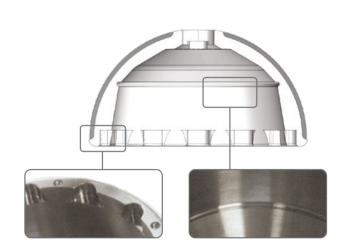

Highcross UHMWPE Liners

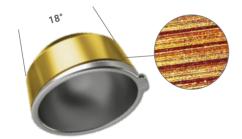

Clipping system + anti-rotation tabs

The **clipping system** for the **polyethylene liners** is placed outside the equatorial weight-bearing area in the thickest region of the liner. This design reduces stresses at the liner/shell interface and minimizes the risk of the liner rim fracture in case of impingement.[1]

Therefore, the match between the anti-rotation tabs in the liner and the indentations on the shell limits rotational micro-movements and potential backside wear.[2,3]

SensiTiN DM Converter

18° taper locking system + micro-threads

The SensiTiN DM Converter tapered surface shows the same geometrical characteristics as the clinically successful Medacta ceramic liner. Micro-threads are also present on the tapered surface to increase stability of the device.
